

14.1.1 Install Tableau Public

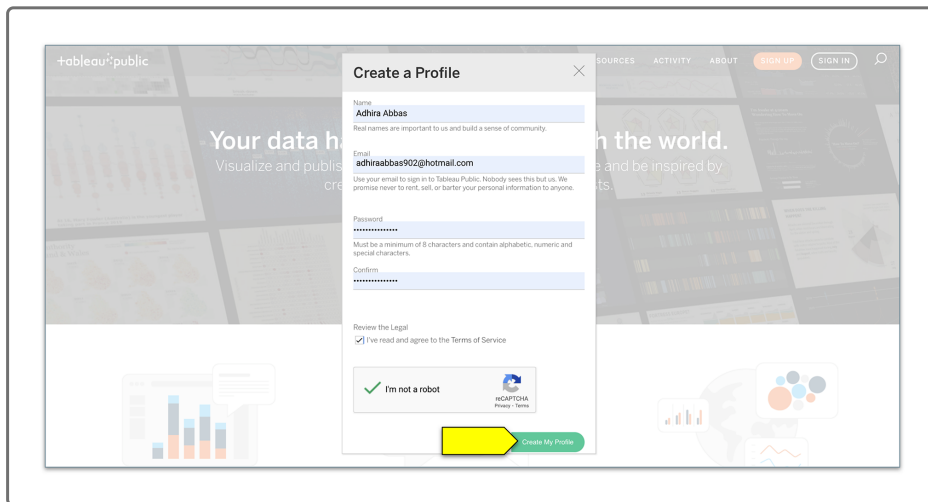

In order to perform your analysis, you need to first download the tool that you'll be using. For your work this week, you'll take a deep dive into Tableau Public, so download this tool now.

Download Tableau Public

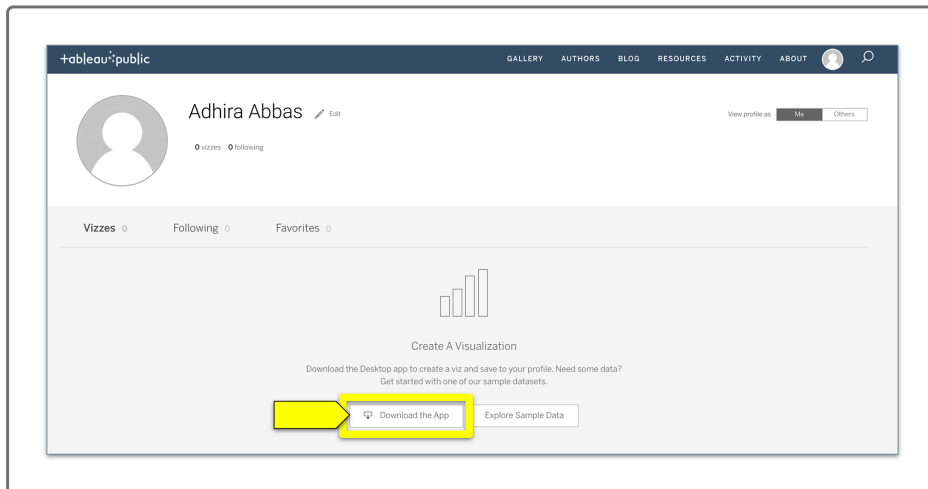

First, go to the [Tableau website](https://public.tableau.com/en-us/s/) [\(https://public.tableau.com/en-us/s/\)](https://public.tableau.com/en-us/s/), and click "SIGN UP" to create a profile or "SIGN IN" if you have a Tableau Public account.

After you fill in the required information for your profile, click "Create My Profile."

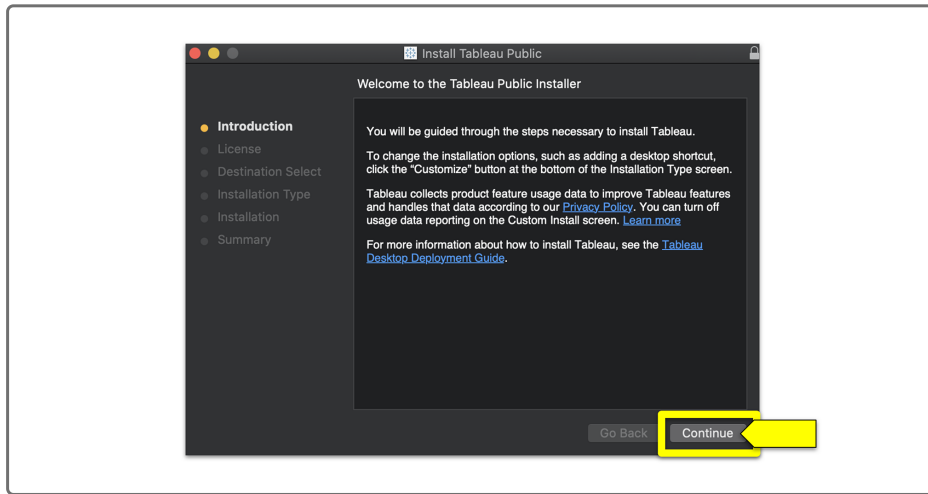

After you create your profile, you will be shown your profile page. Click "Download the App."

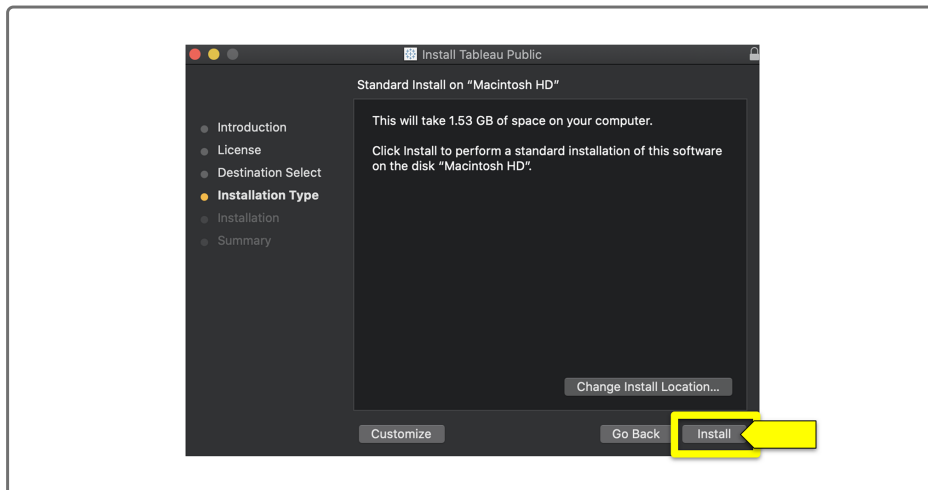

Install Tableau Public

Once you have downloaded Tableau Public, we can start the process of installing Tableau Public. The process of installing Tableau Public is very similar to installing most other programs.

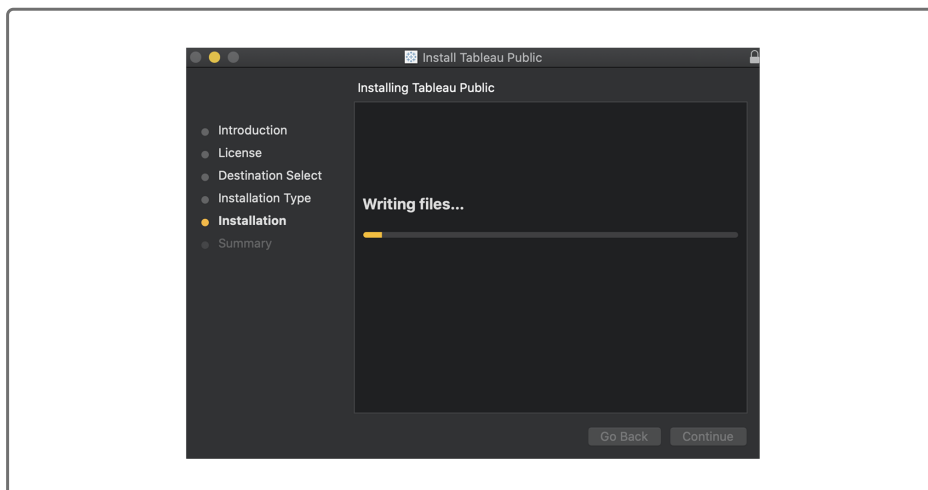

After it's finished downloading, click to open the file and then follow the on-screen instructions. This is the first screen you will see as part of the installation. Go ahead and click "Continue."

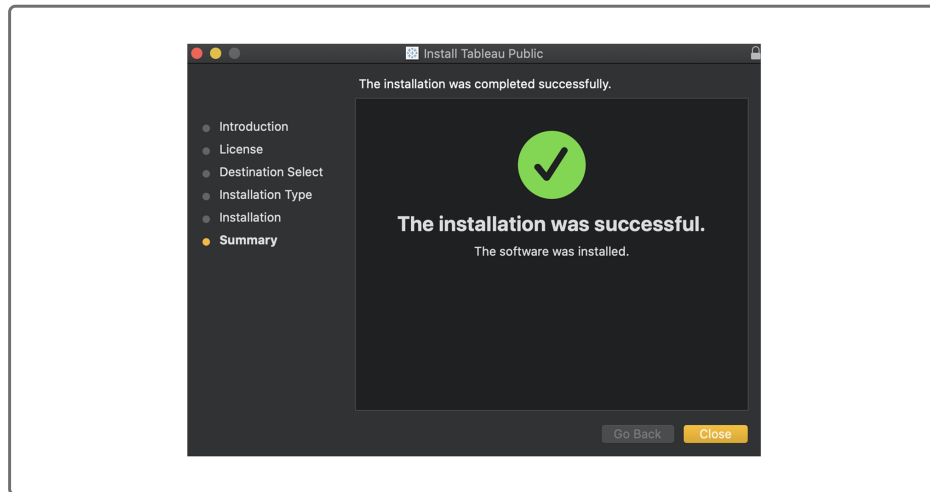

Once you click "Continue," agree to the software license agreement and click "Continue," and you should see the following screen. Click "Install."

This process may take a few minutes. This is what your window should look like:

When the installation is complete, you will see this window confirming that the software was installed successfully:

Now that Tableau is installed, let's get started with downloading the data we'll need.
