

3.1.4 Create a GitHub Repository

Before you leave for the day, Tom thinks it would be a good idea to create a GitHub repository for the election analysis. Creating a GitHub repository will allow you to add the latest version of your project code on GitHub. This way, Tom and Seth can look over your progress on the project and provide assistance if you need it.

It's a common practice among programmers to store scripts in a location that other team members can view, comment on, and edit. Enter GitHub! We'll create a GitHub repository to help us organize, save, and share our code with our manager and other team members. Follow these steps:
