

5.4.5 Commit Your Code

Omar is going to love these results—and V. Isualize may want to look at your code herself. In anticipation for your big break, you make sure to update your GitHub repository.

ADD/COMMIT/PUSH

After you save your `PyBer.ipynb` file to your computer, add it to the PyBer_Analysis GitHub repository by following these steps:

1. Launch the command line or Git Bash.
2. Navigate to your PyBer_Analysis folder.
3. Check the status with `git status`.
4. Add all the file(s) by using `git add .`.
5. Commit the files to be added to the repository and add a Git message, with `git commit -m "message"`.
6. Add the file to your repository by using `git push`.
7. Refresh your GitHub page to see the changes to your repository.
