

3.6.4 Commit the Final Code to GitHub

Congratulations on finalizing the results! You have done a lot of programming and have both learned and achieved a lot over the course of this audit. Before moving on, commit your code to GitHub. Seth and Tom are going to look over your final piece of work before Seth sends your file to the election commission.

Now that we've completed our analysis, we need to save and commit our changes to GitHub. Save `PyPoll.py` to the Election_Analysis folder, and then follow these steps:

1. Launch the terminal for macOS or GitBash for Windows.
2. Navigate to the Election_Analysis folder using the necessary commands.
3. Type `git status` and press Enter.
4. Type `git add .` and press Enter.
5. Check the status again with `git status` and then press Enter.
6. Commit the files to be added to the repository by typing `git commit -m "Adding the election analysis."` and then press Enter.
7. Type `git push` and press Enter to add the file to your repository.
8. Refresh your GitHub page to see the repository changes.
